FANUC P-250iA

The FANUC P-250iA is a full-size painting robot designed for seamless integration into painting lines. Productivity features, such as a hollow wrist and multiple hose routing locations, allow for increased throughput and spraying time. Flexible installation options include floor or inverted mounting for the FANUC P-250iA R-J3iC painting robot.

Available in two sizes for added versatility, the FANUC P-250iA is approved for many painting and coating environments. The payload's range allows for a variety of applicators, including conventional and electrostatic air spray guns and rotary atomizers.

For more information about the FANUC P-250iA, contact a Robotworx representative today at 740-251-4312.
